

QUANTITATIVE DISTRIBUTOR

5

ABSTRACT OF THE DISCLOSURE

10 A quantitative distributor which can change its
discharge volume, can reduce a fluctuation range of the
discharge volume, can quickly fill a path from the
distributor to an injection point with a substance, and
can clean the injection point by the substance. In the
distributor, a discharge volume of the substance from the
distributor corresponds to the pressure of the substance
15 supplied to the distributor, and an elastic body
pressurizing the piston has a Young's modulus which is
variable by a position of the piston.
